

Java Topic Inventory

Folders under src that contain topic-style Java classes

Topic	Class count	Theme
AnonymousClass	7	Anonymous classes, interfaces, and small behavior overrides.
Number_Theory	1	Digit math and elementary number-theory style manipulation.
Queue	2	Queue fundamentals and linear FIFO data flow.
Serialization	2	Object persistence and custom serialization concerns.
Thread	6	Concurrency, coordination, synchronization, and lock-based sequencing.
arrays	82	Array transformation, prefix-sum, two-pointer, greedy, backtracking, and DP-style reasoning.
binaryTree	36	Tree recursion, traversal patterns, path problems, BST reasoning, and tree transformation.
builder	4	Builder pattern and object construction with readability and immutability in mind.
consumer_supplier	1	Functional interface usage and callback-style APIs.
dynamic	3	Dynamic programming fundamentals and optimization by storing subproblem results.
graph	12	Traversal, shortest path, minimum spanning tree, cycle detection, and grid-to-graph patterns.
heap	4	Heap mechanics, priority ordering, top-k queries, and heap transformation patterns.
leetcode	56	Mixed interview practice spanning arrays, strings, DP, graph, stack, and greedy patterns.
linkedList	14	Pointer manipulation, reversals, cycle handling, merges, and list rearrangement.
main	30	Mixed Java practice: inheritance, interfaces, recursion, and miscellaneous interview demos.
parking_lot	2	Low-level system design, entities, and object composition.
priorityQueue	5	Priority-queue style selection problems, streaming top-k, and min/max heap usage.
singleton	2	Singleton pattern variants and lifecycle control.
sort	10	Comparison and non-comparison sorting, partitioning, and order-statistic thinking.
stack	17	Monotonic stack, parsing, expression-like problems, and stack-based state compression.

streams	3	Functional-style transformations and stream pipelines.
trie	4	Prefix-tree based string matching and word segmentation problems.
